

Welcome to the 22nd Year of the Huntsman World Senior Games

Every year it feels like the Games have reached their pinnacle. How could they possibly get any higher? And then every year, you come along and exceed everyone's expectations. Not only do you go higher, but you get faster, fitter, healthier and stronger.

In 2007 once again numerous records were broken, 189 in all, a record in and of itself. There was record participation with 9,503 total athletes showing us how to do what others may think impossible. With more athletes and more divisions being filled, 6,354 medals were awarded to deserving athletes. Performances like these make us so proud to be the Principal Sponsor of this great event.

In 2008 we expect nothing less than to be astonished once again. Keep training, keep trying, and keep inspiring us all. We look forward to seeing you again this October. For those who may be thinking about trying the Games for the first time, don't hesitate. Be sure to join in on the fun and competition this year and begin a tradition that will continue to reward you for years to come.

We Wish You All the Best,

Jon and Karen Huntsman

Dear Friends,

Boy have we ever got a great year planned for you in 2008! As the senior population grows and becomes more diverse, so too will the Huntsman World Senior Games. We're adding two brand new sports, Archery and Badminton, which will open the Games up to a whole new group of inspirational athletes. We'll also be hosting an elite Softball tournament exclusively for Major Plus teams called the Adidas Elite Softball Championship.

We're excited to be adding two additional days to our Health Screenings, which will make these important, life-saving screenings available to more of you than ever before. And finally, to appreciate the global flavor of the Games, you won't want to miss our new International Festival with food, crafts and fun from all over the world.

Remember, register today and I'll see you in St. George in October!

Best Wishes.

John Morgan
President and Founder
